

FOR IMMEDIATE RELEASE, LEVEL OF IMPORTANCE: URGENT

February 24, 2021

FATAL ATTRACTION: **RARE EARTHS**, SHADOW FLICKER, LANDSCAPE RUINATION, INFRA AND LOW FREQUENCY NOISE, VIBRATION, ELECTROMAGNETIC FIELDS. WIND TURBINES IN FRANCE CREATE PURE HELL FOR PEOPLE AND ANIMALS: SPECIAL REPORT: Lawyer Di Vizio aims high at negligence, under the French Penal Code.

M. Eddie Puyjalon, leader of a French resistance to wind turbine proliferation, and his Legal Council M. Fabrice Di Vizio, announce a legal challenge to a “collective hell” from industrial wind in France. Their legal petition, claim is addressed to:

Mr Jean CASTEX, Prime Minister,  
Mr. Olivier VERAN, Minister of Health and Solidarity  
Madame Barbara POMPILI, Minister of Ecological Transition  
Madame Elisabeth BORNE, former Minister for the Ecological and Inclusive Transition

---

Highly toxic rare earths have been detected in hair samples of both animals and people near industrial wind factories. In the claim and in personal communications, M. Di Vizio and his client, M. Puyjalon, describe the transmission /emission of toxic rare earth elements, electromagnetic attractions and other combined wind turbine impacts such as ILFN (Infra and Low Frequency Noise) as venomous, toxic, “killers.”

Matthieu Davoli of toxSeek (sic), the independent lab analysing the hair samples, wrote in a media release: [See link here.](#)

*“We have not observed anything in particular with regard to heavy metals (Editor's note: lead, cadmium, mercury, well known for their toxicity). On the other hand, there are these differences in rare earth dosages make us say that there, we really want/have something! ”*

*The hairs of 40 cows were analyzed in problem farms to compare them with those of 40 other cows less exposed to electromagnetic risks.*

*Following the results of the first toxicological analyzes of **hair from dairy cows** in five farms presenting major problems (including that of Stéphane Le Béhec in Allineuc),*

**FOR IMMEDIATE RELEASE, LEVEL OF IMPORTANCE: URGENT**

*toxSeek Urgence decided to initiate a case-control study on toxic impregnation with rare earths from farms subjected to strong electromagnetic fields.*

*As with human hair, cow hair can be used as a “**biological matrix to demonstrate the bio-marker of rare earth contamination subjected to electromagnetic fields**”.*

***7 times higher toxic rare earth impregnation***

*Toxicological analyzes detecting 49 metals, heavy metals and rare earths on cow hair from 80 subjects were carried out (ICP-MS technology).*

*The toxSeek scientific committee observed that the toxic impregnation with rare earths of dairy cows in the control farms is "very low or nil for a major part of the subjects".*

***On the other hand:***

*"The average toxic impregnation with rare earths is 7 times higher in operations subject to a high electromagnetic risk and experiencing significant health problems".*

***ToxSeek Scientific Committee***

*For toxSeek, this study shows a correlation between the health status of farms, whose cows are subject to toxic impregnation with rare earths, and the electromagnetic risk.*

Additional testing of hair samples in 21 children in November 2019, by the Regional Health Agency (ARS) at the town of Sainte-Pazanne, Loire-Atlantique, was equally alarming. The paediatric cancers in seven sectors, over a time frame from 2015 -2019, showed abnormal receptivity in people living near wind turbines, larger than national averages. (See link, [Claim of M. Di Vizio](#).)

*36 metals were found out of the 46 that were analyzed by the laboratory, thus demonstrating an abnormal receptivity in subjects living nearby from the wind farm (exhibit 13). On January 4, 2020, it is Madame Bouvet's turn to benefit from a screening for pollutants on her hair, the results of which are just as worrying. The values of many metals such as Mercury, Cerium, Dysprosium, Gadolinium, Lanthanum, Neodymium and Praseodymium (nanoparticles found in rare earths) are found indeed well above normal (exhibits 13 and 14)*

Ten farmers or more were deeply concerned about the relationship between electromagnetic forces, rare earths, and loss of animal productivity, or deaths. Farmer Stéphane Le Béhec is hardly an anomaly and he has lost more than 300 cows in four years. *(There are thousands of impacted persons in France, and over 9,000 existing wind turbines. The government intends to*

## FOR IMMEDIATE RELEASE, LEVEL OF IMPORTANCE: URGENT

*facilitate even more on and offshore. In a display of complete blindness and negligence, Macron's agenda calls for between 30,000-50,000 on and offshore. **The number of impacted persons who have signed affidavits for this legal case, is around 500.***)

Lawyer Fabrice Di Vizio, has energetically and methodically crafted his claim. ([See link here.](#))

*Article 3 a) of this directive obliges member states to: "ensure that a criminal offense when unlawful and committed intentionally or negligently at least serious(ly):*

*....the release, emission or introduction of a quantity of substances or radiations ionizing in the atmosphere, soil or water, causing or likely to cause death or serious injury to persons, or substantial deterioration in air quality, soil quality, or water quality, or impacts on flora or fauna."*

Referring to the Penal Code, Article 222-15, Directive 2008/99 EC, M. Di Vizio also points blame at the omission to fight a disaster, and to safeguard certainly foreseeable, warned about, infringements on health and safety (Article 223-7 Penal Code).

Sherri Lange of the North American Platform Against Wind Power has often sadly reflected about and reported on large numbers of animal mortality near wind turbine factories, and the horrific health impacts of nearby residents for ten years. This continues to be a catalogue of serious health impacts, [premature deaths of animals, chickens born without eyes in Colorado, dead cows in California and Ontario, Canada](#), as a small sample. The eerie resemblance to the reports from France causes deep reflection. Says Lange: "This information from France is explosive. It confirms again that not only the wind turbines are magnifying or causing health irregularities and deep harm, but an attendant technology, Master Magnets, or Permanent Magnets (in the generators), used to amplify and maintain power systems in turbines, used in about 30-50% of current wind turbines, are in the toxic mix. Testing from toxSeek (sic) is irrefutable." Adds French activist, Claudia Bawden, "Administration of Harmful Substances, is only one aspect of the torment. It adds to the incomprehensible lack of responsibility taken because governments have known and do know and continue to ignore or even obfuscate."

Di Vizio and his clients are demanding an immediate shut down of the wind turbines.

The North American Platform encourages you to reach out to Claudia Bawden, Eddie Puyjalon, activists, and to Lawyer Di Vizio, and to toxSeek or any other North American Testing lab. ToxSeek can send you a sample kit and analyse your or your animal's hair easily. It may be an opportunity for universal and international claims against those who have perpetuated the harm, over 30 years now.

FOR IMMEDIATE RELEASE, LEVEL OF IMPORTANCE: URGENT

*In June 2013, eight turbines placed in the municipalities of Abbaretz, Nozay, Puceul and Saffré in the Pays de la Loire are put into service by the company ABO Wind.*

*From the start of its installation, in October 2012, the breeders of farms located in proximity to wind turbines note the appearance of behavioral disorders in their animals. Mr Didier POTIRON and Mrs Céline BOUVET indeed remark on their respective herds of dairy cows that they are stressed, difficult to milk, that their immune defenses weaken, their mortality increases, as the number of mastitis and calving becomes more complicated. All these problems have the obvious consequence a drop in milk productivity and a deterioration in its quality (Exhibit 1).*

*A few months after the commissioning of the wind farm, the breeders reported the situation to the company operating the wind farm send geobiologists to the field. These the latter focus first on a problem of water faults in the rock underground caused by digging the foundations of wind turbines that they vainly attempt to solve (part 2 and 3). (sic)*
